

25 January 1965

Mr. Richard J. Cotton
Engineer in charge
Field Engineering Bureau
Federal Communications Commission
1029 Federal Building
Detroit, Michigan 48226

Dear Mr. Cotton:

Your letter regarding a complaint from the Federal Aviation Agency has been received. I agree that interference with aviation channels is a serious matter and you may be assured that we will cooperate to the fullest extent in efforts to eliminate such interference.

As you have requested the log book page for this date is enclosed. You will note that very little activity recorded on the date in question, with none in the afternoon hours. Since the station is kept locked at all times, with a formal sign-out system for the key, I am virtually certain there was no unauthorized operation of the equipment. We have also checked with K&KTX and have ascertained that there was no contact. There were contacts with this station on subsequent days as noted in the additional log sheets which are enclosed, on the 2 and 6 meter bands, but nothing on January 8th. We note also that the address you have for the Case club is somewhat in error, which may or may not be of significance.

In spite of the fact that our log entries indicate that the interference was either from another station entirely, or possibly from another station using the Case station call letters illegally, we are checking in the manner you have suggested to ensure that no spurious signals are radiated. As a school of science and engineering we pride ourselves on the excellence of the technical work we are engaged in, and this includes the activities of the Case Amateur Radio Club.

We will advise you when the tests made are completed. We have also curtailed operation on the 2 and 6 meter bands pending the outcome of tests. Please advise us further of anything further which we must do in connection with this matter.

Sincerely yours,

Marshall F. Crouch
Assoc. Prof., Physics
